

Shock Therapy Kit – 1994.042.001

This week we are featuring the Chas A. Branston Violet Ray Generator & Ozone. An invention of the early 1900's, this medical device would have been used in the treatment of various skin conditions and the minor relief of pain by using 100-120 volts of electricity to shock the patient. Portable and lightweight, these kits were originally created for physicians making house calls due to ease in transportation. This device was said to cure over a hundred ailments including alcoholism, bronchitis, cold in the head, diabetes, grey hair, impotence and much more.

This device even claimed to help with the revitalization of one's appearance, removing wrinkles, tightening flabby muscle and soothing skin. It's no wonder people were drawn to it!

But could this one device really cure the over a hundred ailments it claimed to? While they did have limited medical use, overall these devices could not live up to all their far-fetched claims. The Violet Ray more likely played on people's anxieties of ill health and disease. Who wants grey hair when you could do shock therapy sessions and have the luscious locks you once had. With such promising results, do you think you would have given it a try?

Preventing Spanish Influenza Is Better Than Curing It

Keep your nasal passages, throat and lungs in a perfectly antiseptic condition by the use of the Branston Violet Ray Ozone Generator. No Germs can exist where this is used.

Use it in your home. Install it in your office and factory.

Keep your employes healthy and efficient.
